Abstract

Hey bestie, I wrote you a little report to prove you wrong.

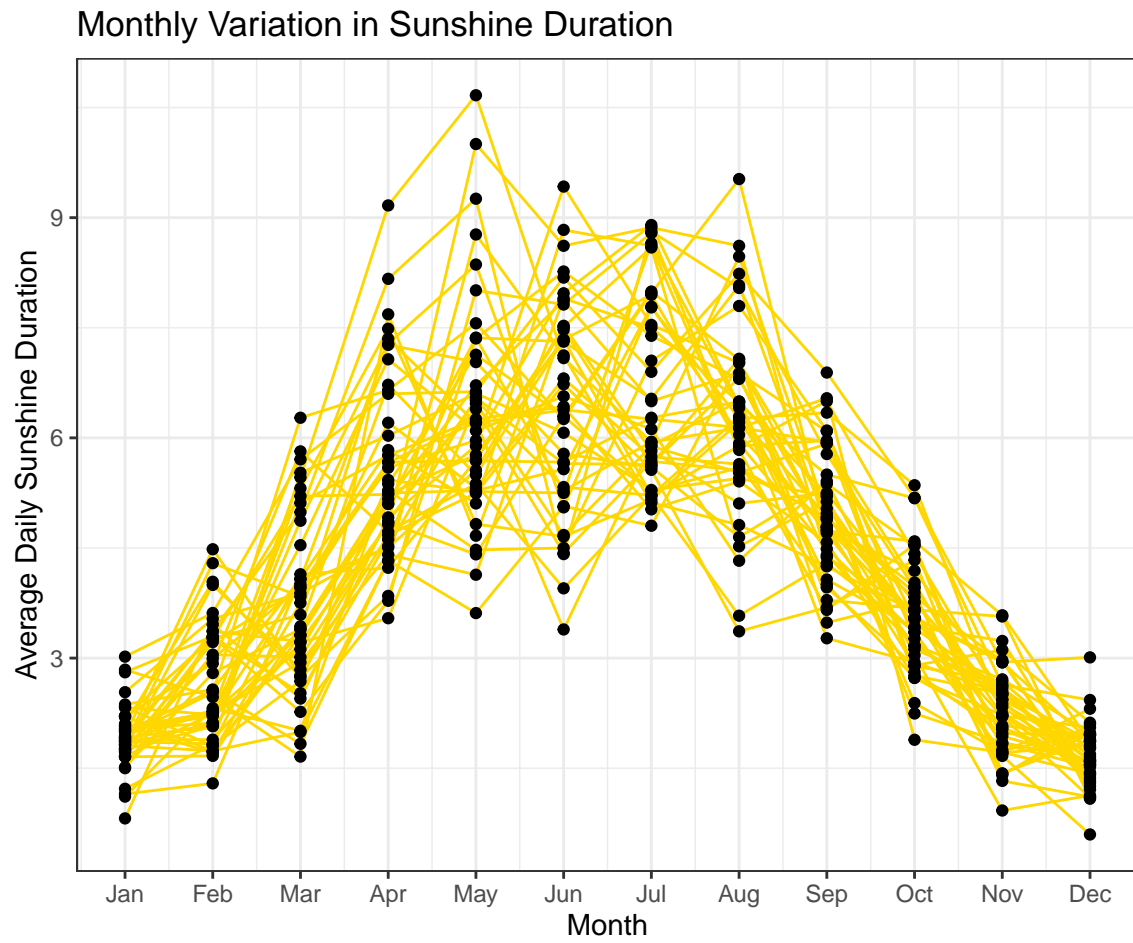

1. Introduction

I've said it before and I'll say it again cloud-er - even though the sun does come out in London, on average, it will not last long.

2. Sun of a beach

In this first graph, I demonstrate that even though the sun does come out, it will not last long. Therefore, if you try to catch some sun, you will probably mist. Pun intended.

3. Weather extremes

In this graph, I show that over the past 40 years London has seen some extreme weather conditions.

Temperature Extremes in London

4. Conclusion

In conclusion, it's not always sunshine and rainbows in London and the extreme weather can be irksome.
